Risk Management

It's a fact! Only 25-35% of operational risks are insurable.

Do you know what your key risks are? What are the emerging risks? What are their consequences? Which risks are not currently well managed? What risks have not yet been identified? What risks can't you absorb or tolerate?

More demanding stakeholders, increased regulation, potential financial or criminal penalties, corporate fraud and uncontrollable events all mean greater uncertainty about meeting future objectives.

In an increasingly complex business environment, the need for an organisation to understand and manage all its major risks is not only critical to achieving strategic goals but integral to good corporate governance.

Developing, implementing and maintaining an appropriate Enterprise-wide Risk Management (ERM) framework requires a sound understanding of the organisation, the business environment and the principles of risk management.

End-to-end risk management solutions

ERM Quick Start

ERM Quick Start helps an organisation take the first steps towards implementing an appropriate enterprise-wide risk management framework using Risk Management Standard AS/NZS ISO31000 and best practice risk management principles.

InConsult has pioneered an innovative ERM implementation road map involving the 4 phases: formalisation, education, embedding processes and sustaining.

With a proven track record of ERM implementation success, InConsult helps get risk management right the first time.

Risk Management Health Check

Our Risk Management Health Check is an independent and holistic review of an organisations risk management framework against best practice standards, applicable regulations and maturity models.

It will provide stakeholders with peace of mind as to the effectiveness and efficiency of the risk management framework.

We help identify the weakest links in your risk management framework and make realistic recommendations, prioritised in order of importance.

"Risk comes from not knowing what you're doing"

– Warren Buffet

Risk Assist

Effective risk management requires a diversity of skills that many companies find difficult to justify, source and retain internally through a dedicated Risk Manager.

Risk Assist enables small and medium sized organisations to maintain a formal, proactive and cost effective risk management function. It is a flexible package of activities designed to help an organisation sustain a recognised and active risk management culture and take the risk out of managing risk.

Risk Enhance

Maintaining and optimising the risk management framework to meet the changing needs of the organisation and achieve best practice and great risk management maturity is one of the most difficult challenges for risk professionals.

Risk Enhance supports today's risk professional by providing both routine and non-routine support to help take risk management to the next level of maturity.

Major Project Risk Management

Research confirms that large projects are more likely to fail than small projects because large projects tend to be more complex, inherently riskier, resource intensive and filled with uncertainty.

Our project risk management services support the project team to improve confidence that the venture will be delivered within the constraints of time and cost and to the required standard.

Risk Management Training

Our Introductory Risk Management Training is an excellent way to help introduce and reinforce the basic concepts of risk management and improve people's skills and confidence.

The course includes DVD's, games and case studies to make learning fun, effective and memorable.

Outsourced Chief Risk Officer

Do you need a highly capable and experienced risk professional to work with the leadership team but want to stay 'lean and mean' to focus on your business?

Our Virtual CRO service provides you with all the benefits of a Chief Risk Officer, cost effectively. Your Virtual CRO provides risk management direction to the CEO and co-ordinates the risk management activities. You will have a dedicated risk professional always by your side.

Start with a basic program and scale up when the business needs grow.

GuardianERM.net

GuardianERM.net is our award winning governance, risk and compliance (GRC) system that is designed to automate, streamline and integrate all risk management, audit, business continuity, compliance and incident management activities.

GuardianERM.net is web-based, easy-to-use, and highly configurable so it can be aligned to your risk management framework and support best practice risk management standards including AS/NZS ISO 31000.
